-----  
Original Description: RP states that a leak of natural gas is occurring  
near a well head at a storage field.

-----  
Update(s): 11/03/2015 09:39:38 AM - DOG has been aware of this release  
since October 23rd when the release was reported to them. The release was  
venting over a third of an acre due to a plugged line the natural gas was  
venting through gopher holes and cracks in the cement. There has been ant  
80% reduction of the release since the onset due to unplugging the line.  
Per DOG the release will be contained within the next 24 to 36 hours  
waiting on special equipment in to handle the release/kill the well head.  
; 11/06/2015 08:57:44 AM - Per DOG 2-The well head is in the process of  
being capped today equipment is on site. There is still is no threat to  
the public. A Well Control Specialist is on scene who is going to remove  
the blockage from the well. If all goes well the well should be capped  
today. A meeting was held with the public with DOG, Fire, ARB and community  
officials present to advise the public reading of the area were below OSHA

exposure levels and explosive gases levels.  
; 11/09/2015 12:56:22 PM - Per DOG2, the release is on going. Well pressures and release rate have remained steady over last week. Surveys are on going to ensure safe operations in preparation to plug the well. DOG will advise when plugging of the line is complete.
